

Problem-based scenario

Overview of Assignment

Based on the information from Jonathan and other materials, we're going to attempt to create a problem-based scenario to be used in the [service courses](#).

Working in teams, you will target your problem-based scenario to a particular major. Common majors in the service courses include

- engineers (all the different disciplines from civil to mechanical to biomedical to electrical to chemical)
- business (with a variety of specializations such as marketing, accounting, finance, management, etc.)
- health sciences

You need to thoroughly research your topic, and while you can definitely use **online sources** (such as wikipedia and trade groups), it is also a good idea to do some **library work** (more academic and scholarly researched) to flesh out your topic.

Deliverable

- written problem-based scenario with supporting materials (if applicable)
- an assignment based on the problem-based scenario
- assessment instrument for your case (can be a rubric) as long as your assessment instrument shows you have thought about how to assess the assignment based on the problem-based scenario

Be prepared to informally present your problem-based scenario to the class.

Due Date

March 20, 2018 (this is the week after spring break. Please do

no wait until this week to start it.)
