Data Visualization Activity

This assignment asks you to consider the implications of poorly visualized data. You will discuss visuals in small groups then present a visual and your analysis to the class.

In small groups:

- Do a Google Image search for "ineffective charts," "ineffective graphs," and "unethical charts."
- Find two or three differently designed graphs and charts and discuss why the data visualizations are not effective.
- As a group, display at least one of your visuals on the projector and explain your analysis to the class.
